H4CK S4LFORD – 2018

Challenge Two

Recommended Language

HTML – using a text editor or program of your choice

CSS – using a text editor or program of your choice

Specification

Salford University want to create a webpage for upcoming students to show what modules and activities we take part in here at Salford. The university want you to create an efficient and presentable website that can show students why studying computer science at Salford is the best!

You can use external packages like bootstrap or other CSS packages, however credit the creator/site of origin.

Judges' Comments

It is often said to not judge a book by its cover, however, this is not true should you choose this task. We want a website that looks nice, responds well and is easy to navigate and understand.

You may find use of bootstrap packages and other CSS altering tools to be more time effective. However, remember you have 3.5 hours. Do not waste too much of your time making it look pretty, we still want some content on the site and we expect there to be pictures and other features for viewers to look at and read.
