H4CK S4LFORD – 2018

Challenge THREE

Recommended Language

C# - Visual Studio

JavaFX – Should you feel brave enough

Specification

The University of Salford Computing Society would like an admin app that enables us to view all our meetings, members and committee members.

It must include all features an admin app would be expected to have. However, we also want to be able for our regular members to download and view the app. As such we would like an area that contains details on all our talks as well as an area where members can catch up on talk they may have missed or wish to go through again.

Judges' Comments

This task has immense potential to weigh a team down in the heavy details of one section. Bear in mind that you have 3.5 hours to hack, you need to make the most of your time. If we see that something works two or three times we shall be happy it works twenty, thirty or forty times. As such do not worry about making pages of information on our talks, worry about getting extra features in there that we may not expect. Ideal submission will make effective use of object oriented programming as well as making effective use of HCI and UI design choices as well as including features that have not been specified.
